I strongly oppose any actions by the FCC to impose any restrictions upon XM Radio, notwithstanding Instant Traffic and Weather reporting. I believe XM Radio can provide more accurate and more instant traffic information to the public than the commercial stations. The commercial stations devote limited time to both traffic and weather and within its schedule time, and to a limited geographical area, which does not conform to the needs of a person traveling outside a metro area. I travel in the Blue Ridge and Smokey Mountains and I depend upon XM radio for entertainment and for information since normal radio reception is not reliable and requires constant station changes to receive a signal.

I agree with XM Satellite Radio that the U.S. Government should not regulate Free Speech to benefit commercial radio.
